ENGINEERING TOMORROW

Data sheet

Safety relief valves
Type SFA 15 and SFA 15-50

SFA 15 and SFA 15-50 are standard, **back pressure dependent** safety relief valves in angle-way execution, specially designed for protection of vessels and other components against excessive pressure.

SFA 15-50 has a 50% reduced capacity compared to SFA 15.

The valve is designed to meet the strict quality demands and safety requirements for refrigeration installations, specified by the international classification societies.

The spring housing is closed tightly to avoid refrigerant leakage.

The inlet flow diameters of the valves are:
- 13 mm (½ in.) for both SFA 15 and SFA 15-50

The valves can be delivered with set pressures between 10 and 40 bar g (145 and 580 psi g).

Standard pressure setting valves having "TÜV Pressure Setting Certificate" with each valve, are also available.

Features

- Applicable for the refrigerants HCFC, HFC, R717 (Ammonia), R744 (CO_2) within a temperature range of –50°C*/+100°C (–58°F*/+212°F)
- Classification: DNV, CRN, BV, EAC etc.
  To get an updated list of certification on the products please contact your local Danfoss Sales Company.

Technical data

- *Refrigerants*
  Applicable for the refrigerants HCFC, HFC, R717 (Ammonia), R744 (CO_2) within a temperature range of –50°C*/+100°C (–58°F*/+212°F). Flammable hydrocarbons are not recommended. For further information please contact your local Danfoss Sales Company.
- *Pressure*
  Pressure setting range: 10 - 40 bar g (145 - 580 psi g). For further information please contact your local Danfoss Sales Company.

  Important: The SFA safety relief valve is dependent on the back pressure (if the back pressure is higher than the atmospheric pressure, the opening pressure will be higher than stated set pressure).

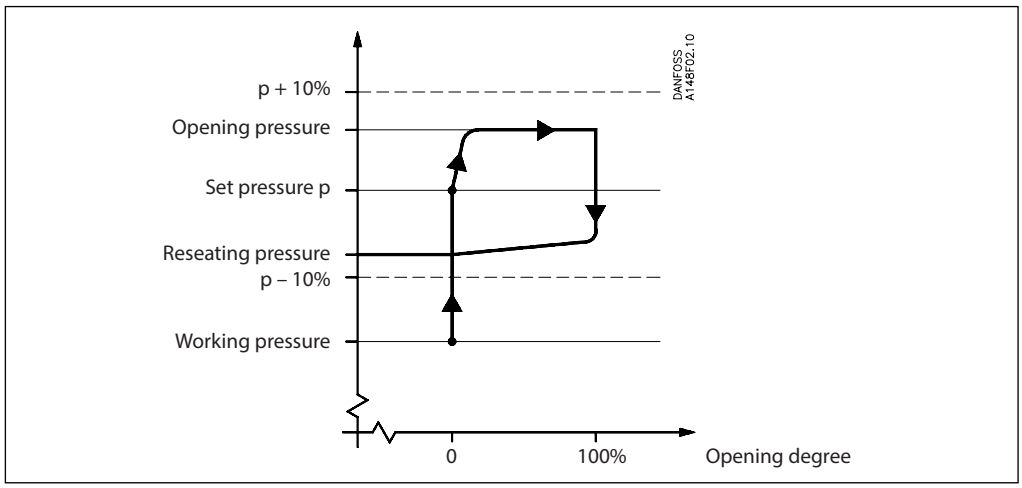
  Special circumstances such as vibrations (which should be avoided) and oscillating pressure may require an increased difference between the operational pressure and the closing pressure.
- *Pressure setting*
  The operating pressure of the plant should be at least 15% below the set pressure. This allows a perfect re-seating of the safety relief valve after having been activated.
- *Temperature range*
  –50°C*/+100°C (–58°F*/+212°F)

* Below –30°C (–22°F) full tightness can only be guaranteed when refrigerant pressure is equal to or lower than 0.5 x P_{set}

Pressure Equipment Directive (PED)
The SFA valves are approved in accordance with the European standard specified in the Pressure Equipment Directive and are CE marked.
For further details / restrictions - see Installation Instruction

SFA valves	
Nominal bore	13 mm (0.512 in.)
Classified for	Fluid group I
Category	IV

Design



SFA is designed as a direct loaded safety valve recommended particularly for refrigeration applications. On a rise in pressure above the set pressure, the safety relief valve will initially start opening slightly, to minimise the outlet of refrigerant. If the pressure continues to increase, the valve will open fully. The safety relief valve will be fully open before the pressure is 10% higher than set pressure, and fully closed before the pressure is 10% below set pressure.

Connections
Available with the following connections:

- Outside pipe thread T (ISO 228/1)
- Welding fittings (EN 10220)

Housing
Made of special steel approved for low temperature operation. Spindle, cone, and seat are made of stainless steel, to ensure precise operation even during extraordinary conditions. The gasket of the valve cone is made of a special cloroprene (neoprene) compound.

Installation
To ensure exact operation of the safety relief valve it should be installed with the spring housing upwards. When the valve is mounted, it is important to avoid the influence of static, dynamic and thermal stress.

A very precise technique has been applied for the production of the seal. However, this seal can still be damaged, if dirt is blown from the pipe system into the valve.

It is recommended that safety relief valves exhaust into the open air with a U-pipe filled with oil on the discharge branch, to prevent dirt from penetrating into the valve. It is also recommended that the valves be installed in pairs in conjunction with the double stop valve type DSV 1 or 2. For further information please see the technical leaflet for DSV.

Re-calibration/servicing
In certain countries the authorities demand that the valves are checked at least once a year (see local rules).

Control/Identification
After adjustment of the set pressure at Danfoss, the valves are sealed. For that reason Danfoss can only guarantee correct operation, as long as the seal remains unbroken.

All valves are provided with a metal plate with the following information:
- Flow diameter
- Set pressure
- Date of production
- Production number
- Type approved code.

Transport/Handling
The valves are fitted with special protection covers and packed into purpose made transportation cartons.

It is important that the cover remains fitted around the valve until it is installed.

To ensure the exact and precise operation of the valve it must be handled with care.

Safety valve	Double stop valve		Max. pressure
	CE marked	Not CE marked	
SFA 15 and SFA 15-50	DSV 1		40 bar (580 psi)
	DSV 2		40 bar (580 psi)
		DSV 15	25 bar (363 psi)

Capacity

The design and construction of the safety relief valve has been tested and approved by TÜV. This test comprises control of the function of the valve as well as measuring of the capacity, which is the basis of the curves and tables on the following pages. The values in the table are based on saturated gas.

If e.g. back pressure or superheated gas have to be taken into consideration, the formulas or the Danfoss computation program (Coolselector2™) can be used.

Table 1.

Valve	Nominal size		Flow diameter	Flow area	De-rated, certified coefficient of discharge	Effective discharge area
	Inlet	Outlet	d_o	A_0	K_{dr}	$A_0 \times K_{dr}$
SFA 15	15 mm	20 mm	13 mm	133 mm²	0.73	97 mm²
	½ in.	¾ in.	0.512 in.	0.206 in²		0.150 in²
SFA 15-50	15 mm	20 mm	13 mm	133 mm²	0.39	52 mm²
	½ in.	¾ in.	0.512 in.	0.206 in²		0.080 in²

The discharge capacity of the safety relief valves are based on (IS0 4126-1 / EN 1313 6).

$$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \sqrt{\frac{p}{v}}$$

q_m Discharge capacity (kg/h).
C Discharge function depending of the actual refrigerant (κ) see table 2 (-).
A_0 Flow area of the safety relief valve (mm²).
K_{dr} De-rated coefficient of discharge ($K_{dr} = K_d \times 0.9$), (the K_{dr} is certified by TÜV) see table 1 (-).
K_b Correction factor for sub-critical flow (-).
$K_b = 1.0$ when the back pressure is lower than approx. 0.5 × relieving pressure ($P_b < 0.5 \times p$).
For all SFV safety valves $K_b = 1.0$
v Specific volume of the vapour at the releiving pressure p. (m³/kg).
p_{set} Set pressure, the predetermined pressure at which a pressure relief valve under operation starts to open (p_{set} is indicated on the metal plate on the safety relief valve).
(bar gauge)
p_{atm} Atmospheric pressure (1 bar).
p Relieving pressure, $p = p_{set} \times 1.1 + P_{atm}$ (bar absolute).

For further details see the above-mentioned ISO or EN standards.
